- b) The Department may temporarily approve additional PBTs from NHTSA's list after conducting a program suitability evaluation. The Department shall maintain a list of PBTs temporarily approved for screening instrument testing in addition to those provided above. PBTs may be temporarily approved for a maximum period of 18 months. The list of temporarily approved PBTs, if any, shall be available to the public.

Section 1286.250 Checking Approved PBTs for Accuracy

PBTs shall be checked for accuracy by a BAT or an individual specially trained to perform PBT accuracy checks at least once every 93 days. To be accurate, the PBT must quantitate a reference sample within plus or minus 0.01 BrAC of the reference sample's value. Accuracy beyond the second digit to the right of the decimal point is not required.

Section 1286.260 Operation of PBTs

The following procedures shall be used to obtain a breath sample to determine a subject's BrAC with an approved PBT:

- a) Each test shall be performed according to an operational procedure programmed into the instrument.
- b) A test shall consist of only one breath analysis reading, based on the PBT's internal operational calculations.
 - 1) A complete and valid breath analysis reading is denoted by at least one air blank, one subject breath test reading, and no breakdown message.
 - 2) Messages such as "No Go", "Void", etc., are not breakdowns or malfunctions. These messages indicate the subject's failure to adequately complete the test.
- c) A subject who submits an insufficient sample or otherwise fails to adequately complete the test or tests may be asked to submit to an additional test or tests.

SUBPART D: SAMPLING PROCEDURES

Section 1286.300 General Sampling Protocol

The arresting officer has discretion to determine whether a subject will be required to submit a breath, blood, and/or urine sample for testing.

- a) If the subject has been in a vehicle crash and must be treated or is currently being treated by a physician licensed to practice medicine for injuries sustained in the crash, the arresting officer will consult with the treating physician to determine how best to test the subject without unreasonably jeopardizing the subject's treatment.
- b) The arresting officer or BAO shall deem a subject who fails to submit to a requested test or additional testing to have refused testing.
- c) When a subject has submitted an insufficient sample or otherwise failed to adequately complete a requested test or tests, the arresting officer or BAO has discretion to determine if the subject:
 - 1) has refused testing; or
 - 2) will be required to undergo additional testing.
- d) The procedures contained in this Subpart are the only procedures required to obtain a valid breath, blood, and/or urine sample. There are no additional sampling procedures.

Section 1286.310 Approved Evidentiary Instrument Operation

The following procedures shall be used to obtain a breath sample to determine a subject's BrAC with an approved evidentiary instrument:

- a) Prior to obtaining a breath analysis reading from a subject, the BAO or another agency employee shall continuously observe the subject for at least 20 minutes.
 - 1) During the 20 minute observation period the subject shall be deprived of alcohol and foreign substances and shall not have vomited.
 - 2) If the subject vomits during the observation (deprivation) period, the process shall be started over by having the individual rinse the oral cavity with water.
 - 3) If the individual continues to vomit, alternate testing shall be considered.
- b) After starting the instrument's breath test sequence, the BAO will obey instrument prompts. When prompted by the instrument, the BAO shall direct the subject to blow into the instrument. The subject shall be directed to keep blowing into the instrument until he or she has submitted an adequate breath sample. Once an adequate breath sample is collected, the instrument shall complete the test cycle and print and display the breath analysis reading.
- c) A breath test shall consist of only one breath analysis reading, based on the instrument's internal operational calculations.
 - 1) A complete and valid breath analysis reading is denoted by at least one air blank, one subject breath test reading, and no breakdown message.
 - 2) Messages such as "refusal", "insufficient sample", "inadequate sample", etc., are not breakdowns or malfunctions. These messages indicate the subject's failure to adequately complete a requested test or tests.

Section 1286.320 Blood Collection for Determining the Presence of Alcohol, Other Drugs or Intoxicating Compounds

The following procedures shall be used to obtain a blood sample from a subject to determine the alcohol concentration, or presence of other drugs or intoxicating compounds:

- a) The blood sample shall be collected in the presence of the arresting officer, another law enforcement officer, or an agency employee who can authenticate the sample.
- b) *The blood sample shall be collected by a licensed physician, registered nurse, trained phlebotomist acting under the direction of a licensed physician, or certified paramedic (Section 11-501.2(a) of the Illinois Vehicle Code).*
- c) A disinfectant that does not contain alcohol shall be used to clean the skin where a sample is to be collected.
- d) Officers shall use DUI kits provided by the Department, if possible. If kits are not

available, officers may submit two standard grey top vacuum tubes. (Pursuant to generally accepted industry standards, grey top vacuum tubes contain an anticoagulant and preservative.)

- e) The individual tubes shall be labeled with the name of the subject and the date of the withdrawal and treated as biohazard evidence.
- f) The blood samples shall be delivered as soon as practicable to a laboratory certified by the Department (see Section 1286.170).
- g) The testing laboratory shall maintain any remaining sample for a period of six months after testing unless otherwise directed by the submitting agency or the appropriate prosecuting authority.

Section 1286.330 Urine Collection for Determining the Presence of Alcohol, Other Drugs or Intoxicating Compounds

UAC testing is not a preferred method of determining the amount of alcohol in a subject and the feasibility of other testing procedures should be explored before deciding UAC testing for alcohol concentration. Urine is the preferred method for drug confirmation. The following procedures shall be used to obtain a urine sample from a subject to determine the presence of alcohol, other drugs or intoxicating compounds:

- a) A sample of urine shall be collected in a manner to preserve the dignity of the individual and to ensure the integrity of the sample.
- b) A urine sample may be collected by the arresting officer, another law enforcement officer, or an agency employee who can authenticate the sample. The officer or agency employee shall be of the same sex as the subject undergoing testing.
- c) A urine sample of approximately 60 ml should be collected.
- d) Urine sample shall be collected in clean, dry containers.
- e) No preservatives shall be used. The containers shall be closed.
- f) The containers shall be labeled with the name of the subject and the date of the collection.
- g) The urine samples shall be delivered as soon as practicable to a laboratory certified by the Department.
- h) The testing laboratory shall maintain any remaining sample for a period of six months after testing unless otherwise directed by the submitting agency or the appropriate prosecuting authority.
